

[Show Text]

Function

- Opens a message window and displays text.

Settings

- Enter the text to display in the [Display text] window. A single window can display up to 4 lines of text.
- The amount of text that can be displayed in 1 line is limited to 38 characters if a face graphic is displayed, and 50 if otherwise. The 2 grey lines drawn in the window indicate the character count.
- If “\” (Control character) is used, various operations can be carried out. The 11 existing control characters are as follows.

\\	Displays the character “\”.
\c[n]	Text displayed after this will be displayed in the nth color (where n is a number from 0~19).
\s[n]	Sets the message display speed within a range of 1~20. The default is 1, and the greater the number, the slower the display (n is a number).
\n[n]	Displays the name of the nth actor (n is a number). Supports nested variable references (e.g. “\n[\v[123]]”). Use “\n[0]” to show the name of the first party member.
\v[n]	Displays the number in the nth variable (n is a number).
\\$	Displays the amount of money in possession in an additional window.
\!	Temporarily halts text display. When a key is pressed, the next part of the message is displayed.
\.	Delays the display of the next part of the text by 1/4 of a second.
\	Delays the display of the next part of the text by 1 second.
> "text" <	Instantly displays the text between “>” and “<”.
\^	Closes the message window without waiting for a keypress.
_	Displays half the size of a space.

- “\$” can be used to display special characters provided by this software. Please refer to “[Special Characters Reference](#)” for the special characters that can be displayed.

Notes

- Characters that exceed the character count that can be displayed on a single line will be ignored. Please press the Enter key to insert new lines as required.
- During message display, specified character actions, screen tint changing and other processing will still be carried out.
