

in the last line of the event to change the settings again.

[Change Faceset]

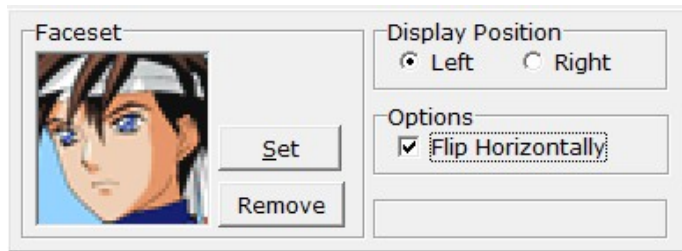

Function

- Controls the face graphic as displayed in the message window.

Settings

- Under [Face graphic], specify the graphic to display. In the window that opens when the [Settings] button is pressed, click to specify a graphic, and click the [OK] button.
To remove the face graphic display, click the [Delete] button, and register an empty [Face graphic] event command.
- Under [Display position], specify whether the face graphic should be displayed on the left or right of the message window.
- If [Horizontal flip] is enabled under [Options], the graphic will be displayed horizontally flipped.

Notes

- Face graphic settings are limited to the processing of the same event. When each event begins processing, face graphics are set to be not displayed.
- Face graphics settings will be used from the next message window onwards.
- Settings will be preserved for 1 face graphic, and message windows will reflect the effects of the last event command. When representing a conversation between multiple characters, use this event command to specify face graphics whenever a change is needed.
