- Under [Actor], specify the actor whose experience points should be changed from one of the following options.

Entire

Party

All the members of the party at the time the command is carried out will be the targets of this command.

Fixed

Variable

A particular actor will be the target. Choose the actor from the dropdown menu.

The actor with the same number as the value stored in the given variable will be the target.

For example, if variable no. 2 is specified which contains “5” at the time the command is processed, actor no. 5 will become the target of this command.

Choose the variable to use from the [Variable] window which can be opened by clicking the [...] button.

- Under [Operation], specify whether the actor should gain or lose experience points.

Increase Increases experience points.

Decrease Reduce experience: Reduces experience points.

- Under [Operand], choose one of the following methods to specify the amount by which the experience points should be changed using the [Operation].

Constant Uses a constant value. Enter the value to change by within a range of 1~99999999.

Uses a value stored in a variable. For example, if variable no. 2 is specified which contains “5” at the time the command is processed, the amount changed will be “5”.

Variable Choose the variable to use from the [Variables] window which can be opened by clicking the [...] button.

- If [Show Level Up Message] is enabled under [Option], a message window will show to display the level up message if the change in experience is enough to trigger an increase in level.
