

# [Battle Processing]

## Function

- Enters a battle with enemies.

## Settings

- Under [Encountered enemy group], choose one of the following methods to specify the enemy group to fight.

**Fixed** Battle a specific enemy group. Choose the enemy group using the dropdown menu.

Uses the enemy group with the same number as the value stored in the given variable.

**Variable** For example, if variable no. 2 is specified which contains “5” at the time the command is processed, actor no. 5 will become the target of this command.

Choose the variable to use from the [Variable] window which can be opened by clicking the [...] button.

- Under [Battle Format], choose the battle style from [Normal], [Surprise Attack], [Back Attack], [Preemptive Attack] or [Pincer Attack] using the radio buttons.

The specifics of each type of battle will be handled on the battle screen. If manual placement is chosen on the “[Battle Screen](#)” tab, [Pincer Attack] cannot be chosen. Under [Battle background], specify the background image to use in battle.

- **Use terrain settings:** Use the battle background as assigned to the terrain that the player is standing on when this command is carried out. If a battle background is set for the map, it will be used (similar to normal encounter battles).
- **Specify:** Uses a specific background image. Click [...] to display the [Battle background graphic] window, select the file to use from the list, and click the [OK] button to specify the image.

- Under [If escaped], specify handling for when the [Escape] command is selected during the battle.

- **Can't Escape:** The “Escape” command is disabled.
- **Interrupt Event:** Event handling will end at that point.
- **Conditional Branch:** Creates a branch for when the player escapes from the battle.

- Under [If Defeated], specify handling for when the player's party is wiped out.

- **Game Over:** Treated as a Game Over.
- **Conditional Branch:** Creates branches for both win and loss cases.

- If [Preemptive attack] is enabled under [Option], the battle will begin with a pre-emptive attack (starts with the time gauge at MAX) by the player party.
