

[Inn Processing]

Function

- Begins Inn handling.
- An Inn is defined as a shop that removes all statuses and fully recovers HP and MP of all of the player's party members.

Settings

- Under [Message Type], choose the message type to display from the dropdown menu.
- Specify the amount of money (between 0~999999) required to stay at the inn under [Cost].
- If [Player stayed...] is selected as an option, branch handling can be set depending on whether the player chose to stay at the inn or otherwise.

Notes

- If the inn cost is set to 0, inn handling will occur without showing any messages.
