

[Tint Screen]

Function

- Controls the overall tint and saturation of the screen.

Settings

- Under [Color Tone], specify the values of the color components [Red (R)] [Green (G)] [Blue (B)] [Saturation (S)] between 0~200%. To do this, drag their respective sliders or directly enter numerical values.
- The default is 100%. The closer it is to 0%, the less influence the color will have on the screen. Conversely, the closer it is to 200%, the more influence it will have. For example, if only [Red (R)] is increased, the entire screen will become reddish. The new tint can be seen in the preview under [Sample].
- Under [Time], specify the length of time over which to finish changing the color tint. The unit is 0.1 seconds.
- If the [Wait for Completion] option is activated under [Option], the player will not be able to move until the tint has finished changing.

Notes

- The changed color tint will also show during battle.
- The tint will not show on menu screens, various windows, face graphics, pictures and movies.
