

The effect of the wait command is the same as the effect when a message is displayed onscreen using [show wait].

[Play BGM]

Function

- Plays a BGM sound file. Any BGM that was playing before this command will be stopped.

Settings

- Choose the name of the sound file to play from the list on the left and click [OK].
 - When choosing the file, the format for playback can also be set. When [Play] is pressed, the BGM can be listened to according to the defined format (To stop playback, click the [Stop] button).
- [Fadein Time]: Specify the duration required for the sound to reach the set volume starting from silence, within a range of 10 seconds. If set to “None”, the sound will play at the specified [Volume] from the beginning.
- [Volume]: Specify within a range of 0 (silence) to 100% (loudest).
- [Tempo]: Specify the playback speed within a range of 50-150%. At 100%, the playback speed will be the same as the original file's. At 50%, it will be half the speed, and 1.5 times the speed at 150%.
- [Balance]: Adjusts the sound level from the left and right speakers during stereo playback. If set to center, the sound will be played at the same sound level from both speakers.

Notes

- If the current BGM is the same as the specified sound file, this command will be ignored.
