

[Set Teleportation Point]

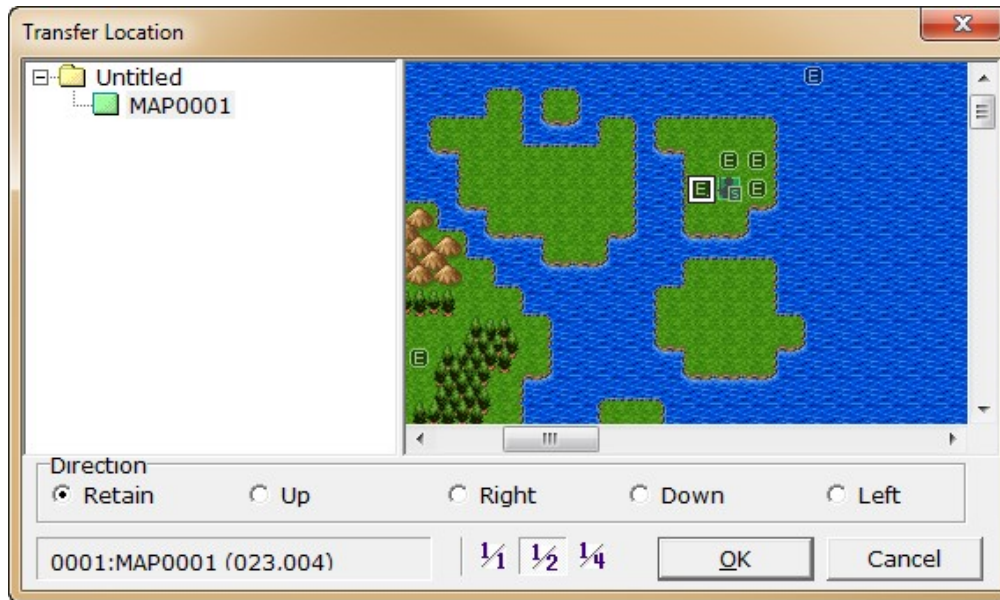

Function

- This command adds or removes locations that can be teleported to using teleportation skills and items.
- Only one teleport location can be set per map or area.

Settings

- Locations can be added as follows.
 1. Under [Operation], choose [Add].
 2. Under [Location], click the [...] button to open the [Transfer location] window (see below).

3. Click to choose the map/area containing the desired location from the list on the left side of the window.
 4. From the map/area shown on the right side of the window, click to select the position, then click the [OK] button. The map zoom level changes when [1/1], [1/2] or [1/4] is clicked.
 5. If [Switch to turn ON after teleporting] is enabled, a specific switch will be turned ON when the player teleports to the location specified in 4. The switch to be used can be selected from the [Switches] window which can be opened by clicking the [...] button.
- Locations can be removed as follows.
 1. Under [Operation], choose [Remove].
 2. Under [Location], click the [...] button to open the [Transfer location] window.
 3. Choose the map/area that contains the teleport location to remove from the list on the left side of the window, and click the [OK] button (there is no need to specify the location itself).

Notes

- If another teleport location is added to a map or area that already contains a teleport location, the previous teleport location will be removed.
- To set multiple teleport locations on the same map, create areas in the map, and specify teleport locations for those areas.
- If more than 1 teleport location is set, teleportation skills will become usable.
