

# [Battle Events]

## Function

- Creates branching in the event content to provide handling when conditions are met.

## Settings

- Under [Condition], specify one of the conditions to handle event branching.

- **Switch**

The condition will be set based on the state of a switch. Click the [...] button to open the [Switches] window to specify a switch, and specify if the switch's state should be [ON] or [OFF].

- **Variable**

The condition will be set based on the value stored in a variable. The variable to use (A), the value to compare it with (B) and the operator (C) are specified as follows. As an example, to set the condition “Variable no. 1 is greater than 5”, set A as “0001”, B as the constant “5”, and C as “Greater than”.

(A) Variable to use:

Click the [...] button to open the [Variables] window to specify the variable.

(B) Value to compare:

Specify using one of the following methods.

Constant: Compare with a constant value. Enter within the range of -999999~999999.

Variable: Compare with a value stored in a variable. Click the [...] button to open the [Variables] window to specify the variable.

(C) Operator:

From the dropdown menu, choose the range that the variable should fit in from the 6 options below.

Equal to:  $A = B$

Greater than or equal to:  $A \geq B$

Less than or equal to:  $A \leq B$

Greater than:  $A > B$

Less than:  $A < B$

Not:  $A \neq B$

- **Actor:**

Checks if an actor can move. Choose the actor to check from the dropdown menu.

- **Enemy ~ can move:**

Checks if an enemy can move. Choose the enemy to check from the dropdown menu.

- **Enemy ~ is the target:**

Narrows down the target from the enemies present. This is useful when creating special commands such as “Steal”. Choose the target enemy from the dropdown menu.

- **Battle command:**

Begin handling when the specified command such as a skill or item is used. Choose “Actor” and “Command” from the respective dropdown menu.

If [Set handling when conditions do not apply] is enabled under [Options], a branch will be created for handling when the specified conditions are not met.
